## Projects

### Herobook • Live • GitHub

*Social networking site inspired by Facebook.*

- Backbone.js app consuming RESTful JSON Rails API.
- Uses jBuilder to send essential custom data from Rails model associations.
- Overwrites Backbone.js parse method to organize and access the data from Backbone.js models.

### Active Record Lite • GitHub

- Uses Ruby metaprogramming to clone Active Record's ORM features.
- Features mass assignment, querying, and association methods.

### Asteroids • Live • GitHub

*Classic from Atari rebuilt for the browser using JavaScript and HTML5 Canvas.*

- Uses trigonometry and vector mathematics to determine asteroid, ship, and bullet movement.
- Features increasing level difficulty and shield ship protection.

## Skills

Backbone.js, JavaScript, Ruby, Ruby on Rails, PHP, HTML, CSS, jQuery, SQL, git

## Education

**App Academy** • New York, NY • January - April 2015

Full-stack web development course • acceptance rate < 5%

**Dartmouth College** • June 2014
